

Internship

Environmental Technology – Waste Water – Agriculture

SF-SoepenberG GmbH ist specialized to recycle wastes to fertilizers. We produce sustainable fertilizers at different sites in Germany.

SF-SoepenberG GmbH is a SME that supports its clients efficiently to manage their wastes. Within this context we deal fast and innovatively with different and multiple challenges.

We offer you an interesting internship (minimum 4 months). After a thorough introduction into our laboratory and pilot facilities you will work on defined projects independently.

Here are some examples:

- Optimization of struvite precipitation in waste water (and digestate)
- Rectification of waste water with ammonium
- Production of fertilizers from recycled products
- Operation of a pilot plant to precipitate P from waste water

In case you are in the second semester of either a BSc. or MSc. course, you speak preferably German (or English), you are eager to learn more how chemistry is the base of most of the „hot“ environmental issues and you are able to work independently, we are looking forward to receive your application or questions related to the internship: j.clemens@soepenberG.com.
